Stephen Borch

1. Peruse the ACM Code of Ethics that the author cites. Have you read a professional code of ethics before? - **No, I have not read a professional code of ethics before.** Which three principles/responsibilities do you think are most important for fresh college grads entering the tech industry today? Why? - **I think 1.5 Respecting the work required to create new things (ideas, inventions, creative works, computing artifacts) is important because it is so easy to take credit for what someone else has done, especially in today's society, as most people will not think twice to do the research about the specifics of who did what. I think 1.6 Respecting Privacy is important because it can be easy to use data that has already been collected that might include someone's private data that might harm that person in some way, and it can be easy to profit off of people's private data without their knowledge in many different ways. I think 2.7 is important because many people do not understand the specifics of what someone might have gone to school to specialize in, and that might give that person an unfair advantage in many ways, and it is easy to use the lack of public knowledge to one's advantage to exploit them or harm them in some way. Also, informing the public can help to improve society for everyone to allow everyone to be on the same page and give everyone an equal chance.**
2. What do you think of the parallel the author draws between Big Tobacco and Big Tech? In this context, is it a fair comparison? Why or why not? - **I think the comparison is mostly reasonable as there are moral dilemmas that occur in both sectors, but the dilemmas themselves are very different. Working for Big Tobacco was morally questionable because they are**

selling a product that could cause physical harm to people. However, Big Tech can cause different harm to users, like privacy violations and stolen information. This makes the workers' responsibility somewhat the same as they have to ask themselves if they should work at a company that causes these issues, but the harm that Big Tobacco is causing is entirely separate from that of Big Tech.

3. What are your career aspirations? Are you considering working at a Big Tech company? What are "hard questions" you think current and aspiring Big Tech workers should be asking themselves? - **My career aspirations are to work for Big Tech, or Medium Tech if that is a thing, to gain some experience to then work for smaller more specialized tech companies, so I have more control over when I work and what I work on and how ethical it is. I think some hard questions that current and aspiring Big Tech workers should be asking themselves are: "Why do I want to work at this company?", "Am I working here because I stand with the beliefs of this company or to get paid?", "Is going against the common good worth making money or furthering my career?".**
