Stephen Borch

1. Letterboxd Data (movie journal site)
    a. Is the data source automatic or manual? - **The data source is automatic.**
    b. How will the data be collected? If this is an automatic data source, provide a screenshot of example data you are able to download. - **It will be collected by accessing the Letterboxd database that stores all of my viewed movies and reviews and watchlist and more. Example Data (Letterboxd is currently down at the time of writing this):**

I should be able to get more specific data and data over a larger span of time.

    c. At what interval is the data collected? (e.g. minute-by-minute, daily, at each meal, etc.) - **The interval that the data is collected is Film by Film, yearly, monthly, every movie that I have logged, etc.**

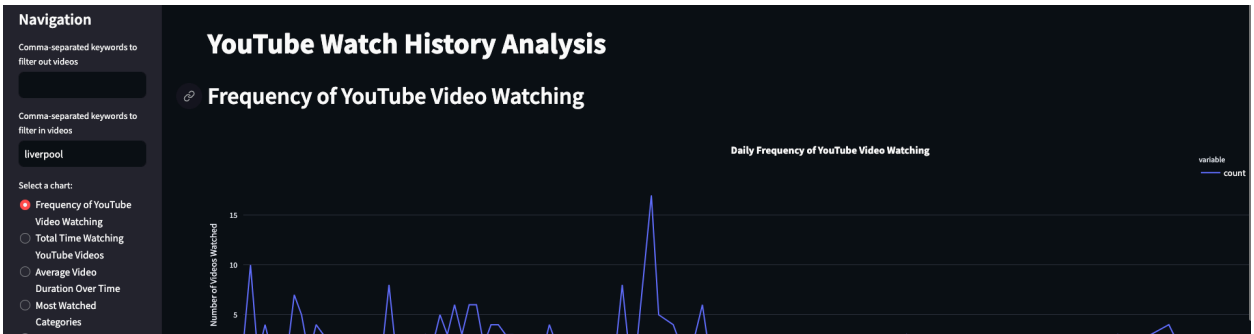

d. What are different attributes/dimensions of the data? For the Fitbit example, this would be steps, heart rate, calories burned, sleep levels, etc.) - **Different attributes of the data would be genres, language, country of origin, years, what day I watch the movies, the rating I gave the movies, etc.**

e. Why are you interested in this data source and what would you hope to learn from your analysis of your own data collected from it? - **I am interested in this data source because movies are an escape for me and I feel like movies can teach you things that nothing else can in ways that you might not expect. I hope to learn what different types of movies I watch the most and if there are any correlations to what movies I watch, whether that be the genre or feel of the movie, and when I watch them, whether that be the time of day, time of year, or a specific time in my life. Mainly I am hoping to learn how watching movies affects me as a whole, such as emotionally, spiritually, etc., and what specific movies affect me the most.**

2. Youtube Watch History

a. Is the data source automatic or manual? - **The data source is automatic.**

b. How will the data be collected? If this is an automatic data source, provide a screenshot of example data you are able to download. - **The data will be collected by going to my Youtube account and downloading the watch history data. Example Data:**

c. At what interval is the data collected? (e.g. minute-by-minute, daily, at each meal, etc.) - **The data is collected daily, weekly, monthly, yearly, every video I have ever watched, etc.**

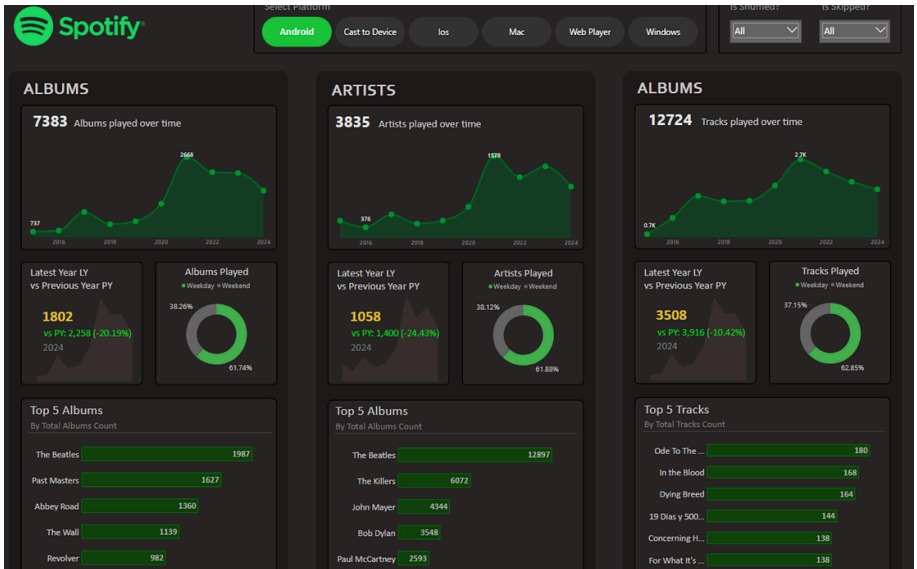

d. What are different attributes/dimensions of the data? For the Fitbit example, this would be steps, heart rate, calories burned, sleep levels, etc.) - **Different attributes of the data would be genre, creator, video length, when I watch during the day, total time watching youtube, etc.**

e. Why are you interested in this data source and what would you hope to learn from your analysis of your own data collected from it? - **I am interested in this data type because I watch at least some Youtube every day and it would be cool to track the specifics of what I watch and during different times in my life. I would hope to learn if I watch too much Youtube and when I am watching the most to possibly cut back on my watch time.**

3. Spotify Data

a. Is the data source automatic or manual? - **The data is automatic.**

b. How will the data be collected? If this is an automatic data source, provide a screenshot of example data you are able to download. - **The data will be collected by accessing my Spotify listening history on my Spotify account. Example Data:**

c. At what interval is the data collected? (e.g. minute-by-minute, daily, at each meal, etc.) - **The data is collected daily, monthly, yearly, every song I have listened to, etc.**
d. What are different attributes/dimensions of the data? For the Fitbit example, this would be steps, heart rate, calories burned, sleep levels, etc.) - **Different attributes would be genre, time of day, artist, length of song, instrumental or lyrical, etc.**
e. Why are you interested in this data source and what would you hope to learn from your analysis of your own data collected from it? - **I am interested in this data source because I would like to know what type of songs I listen to at different times of the day and times of the year and I listen to a lot of Spotify. I hope to learn what songs I listen to the most so I can develop a curated playlist of songs that I have not listened to very much that I might like based on songs that I currently like, and so I can learn what types of music makes me feel different types of emotions.**
